Source of Psychometric Data

Stanford Arthritis Self-Management Study. Psychometrics reported in: Lorig K, Chastain RL, Ung E, Shoor S, & Holman HR: Development and evaluation of a scale to measure self-efficacy in people with arthritis. *Arthritis and Rheumatism*, 32, 1, 1989, pp. 37-44.

Scoring

The score for each item is the number circled. If two consecutive numbers are circled, code the lower number (less self-efficacy). If the numbers are not consecutive, do not score the item. The score for the scale is the mean of the items. If more than 25% of the items are missing, do not score the scale.

Comments

The original response categories for these scales were 10-100, with “moderately certain” place midway between “very uncertain” and “very certain”. We found that subjects tended to circle the phrases rather than the numbers, and there was some confusion about whether “moderate” was truly in the middle for all people, so we dropped “moderately” from the scales. Data above have been adjusted to reflect the 1-10 response categories that we use now. The Self-Efficacy Function Scale should be scored separately, but Self-Efficacy Pain and Self-Efficacy Other Symptoms may be combined.
